

ABSTRACT

Development of Society under Modern Technology+

Aasif Ali Naikoo*

Abstract: The main objective of the present study is to know the relationship between society and technology, where emphases have been put on development process under modern science and technology and its perspectives. Technology has completely revolutionized present era in every aspect of life especially dealing with society. Technology has transformed the methods of education, communication, business, art and literature, and has resulted in the enhancement in the core spheres of life. Before this blessed gift the knowledge regarding the above mentioned spheres was limited because of the restricted methods and methodologies. Due to blessings of science and technology we are now able to check the advancement of every department working around our society with a single click of the mouse. It is technology which helps us to differentiate about the development process of all sections of society and help us to maintain the development process. Technology has brought our societies close to each other where we can take any initiative about any social issue or discuss any matter of concern regarding the society by sitting in our homes by using video or audio conferencing. This paper will elucidate over all development process of our society under the shades of science and technology.

KEY WORDS: Society, Science, Technology, Development.
