Artificial Intelligence and Social Science: Insights To Opportunities

Shikha Bajaj

Abstract: *The potential for artificial general intelligence has been seen in light of recent developments in artificial intelligence. Numerous studies on the intersection between social science and artificial intelligence have been prompted by the growing human-like capabilities of AI. The field of explainable artificial intelligence has recently seen a rebirth as practitioners and researchers attempt to make their algorithms more transparent. It should not be controversial to state that examining how people explain to one another can be a helpful beginning point for explanation in artificial intelligence. However, since AI is being used more and more in every aspect of contemporary life, it is imperative to talk about how it can be used in the social sciences. Present paper focuses various areas in which social science can face an impact of any nature, with the intervention of artificial intelligence and how later can be utilized to provide a help in social science research.*

Keywords: Artificial, Intelligence, Social Science, Online, Research, Subject

Introduction

Artificial intelligence (AI), it is commonly assumed that the study of natural sciences is where it belongs. The frequently made correlation gives the impression that hard science influences AI's nature and would be relevant to its derived applications.
